## **1. INTRODUCTION**

Urban Profile is a single document that captures all information's about cities/towns from different data sources i.e. primary and secondary data sources.

An urban profile offer a detailed snapshot of the conditions of an urban area to provide a set of information and plans that officials as well as NGOs and other stakeholders can use to make sustainable urban planning decisions. This mapped information can range from demographics data to mobility and infrastructure to environmental studies. And while urban profiling does extensive context analysis, it actually goes one step further by making policy recommendations.

Urban profiling is an effective way of developing a shared understanding of the urban environments across different sectors and key indicators many of which are represented within demographical, economical, municipal, infrastructural development and basic social services like education, health.

It is prepared by FDRE Ministry of Urban and Infrastructure. Ministry of urban and infrastructure is a federal organization which has its own duties based on proclamation number 1263/2021 “undertaking studies relating to urbanization, in coordination with other relevant bodies establish system for integrated urban development & preparation of national spatial plan; follow up implementation of same” is among the duties specified for the ministry office.
